TERMS.

Cash in 30 days to parties of approved credit.

Interest will be charged after 30 days.

All accounts for the month are due the first day of each succeeding month, subject to sight draft after the 10th, without notice.

As an EXTRA INDUCEMENT FOR PROMPT CASH, two per cent. may be deducted from all bills paid ON DELIVERY.

Strangers ordering goods, to avoid unnecessary delay will please give city reference, or remit Post Office or Express Money Order, Registered Letter, or Bank Draft on New York, as in **no** case will goods be shipped on receipt of **strangers'** checks, until their value can be ascertained.

Orders for goods to be sent C. O. D. must be accompanied by at least one third their value in cash.

Boxing will be charged at cost when required for the protection of goods.

On account of the advancing cost of materials and labor, our prices will be **subject to change without notice.**

TDCAT 1886 PATPV03B812

TO THE TRADE.

We beg leave to call your attention to our **Machine Turned Balusters.** We are the owners of the U. S. Patents for the only **Baluster Machine** making a shaving cut, with the same tool used by the hand turner, but controlled by an **Iron Hand**, which cannot vary from the pattern set.

The Balusters are finished equal to those turned by hand, but are superior in being uniform in **Shape** and **Size,** obviating loss of time to the stair builder in fitting the necks in the rail.

We furnish our Balusters with Tait's Patent Dovetail, **when so ordered,** and plane square bases true with turning, at list prices.

Our Machines are now fitted to turn the regular styles of 1½, 1¾, 2, 2¼, and 2½ inches diameter, and New Styles will be constantly produced.

Our regular stock Balusters are turned 2 feet 8 inches and 2 feet 4 inches long, called "Long" and "Short," of Black Walnut, Cherry, Ash, and Black Birch.

Balusters will be turned of other woods, but will cost proportionally higher—on account of waste in cutting from plank.

Odd lengths to order at a small additional cost.

We are also prepared to execute any description of hand turned work.

THE STANDARD WOOD TURNING CO.

JAS. DAVIES,
Superintendent.

WM. J. TAIT,
Treasurer.

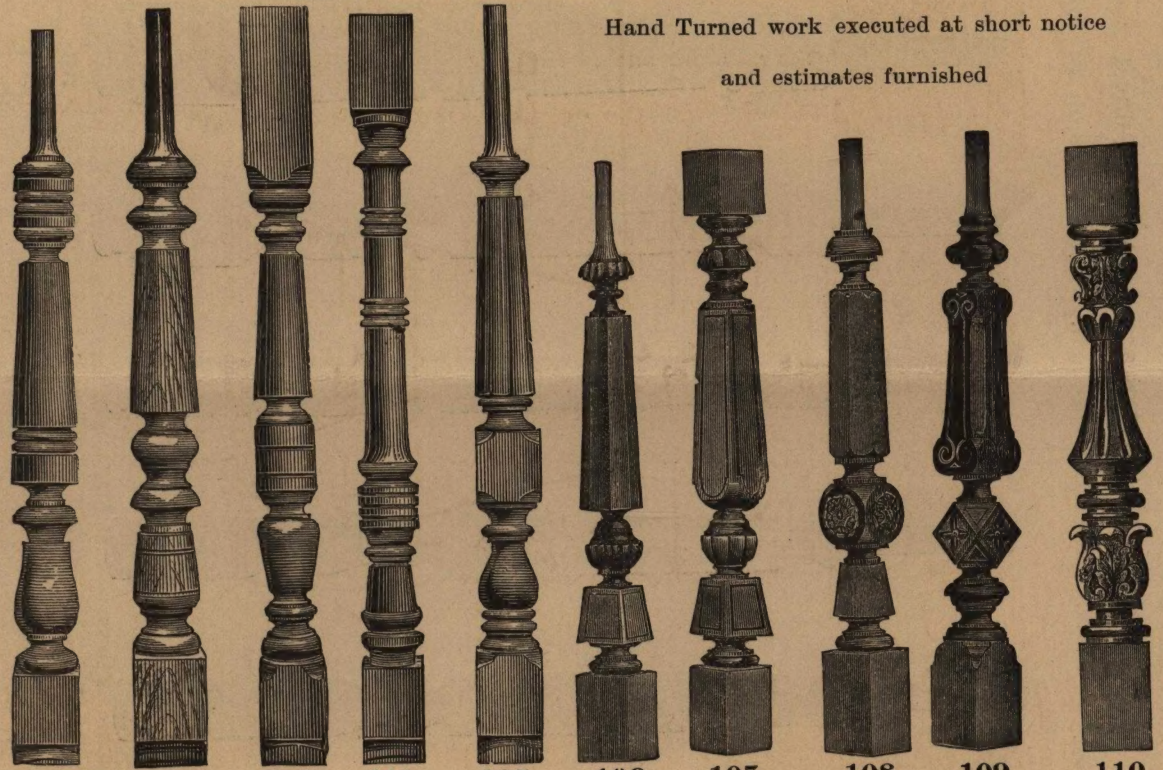
Hand Turned work executed at short notice

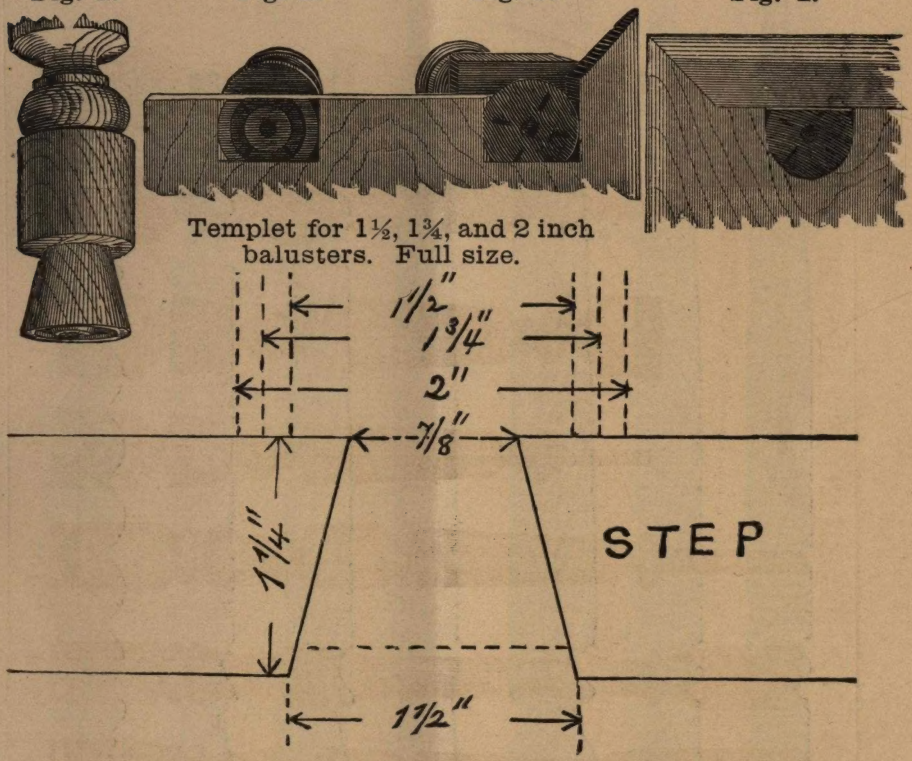
and estimates furnished



No. 101 102 103 104 105 106 107 108 109 110

Tait's Patent Dovetail cut on any style of Machine Turned; Balusters, when so ordered, without extra charge.

Fig. 1. **Fig. 2.** **Fig. 3.** **Fig. 4.**



Templet for 1½, 1¾, and 2 inch balusters. Full size.

We will also dovetail any pattern of hand turned balusters, at an additional charge of 50 cents per hundred.

The advantages of this mode of dovetailing are:

1st. The dovetails, being cut by special machinery, are uniform in size and angle, insuring a perfect fit.

2d. As the baluster can be placed in the step in any desirable position, minor defects can be disposed of to advantage.

3d. The base is not disfigured by accidental saw cuts.

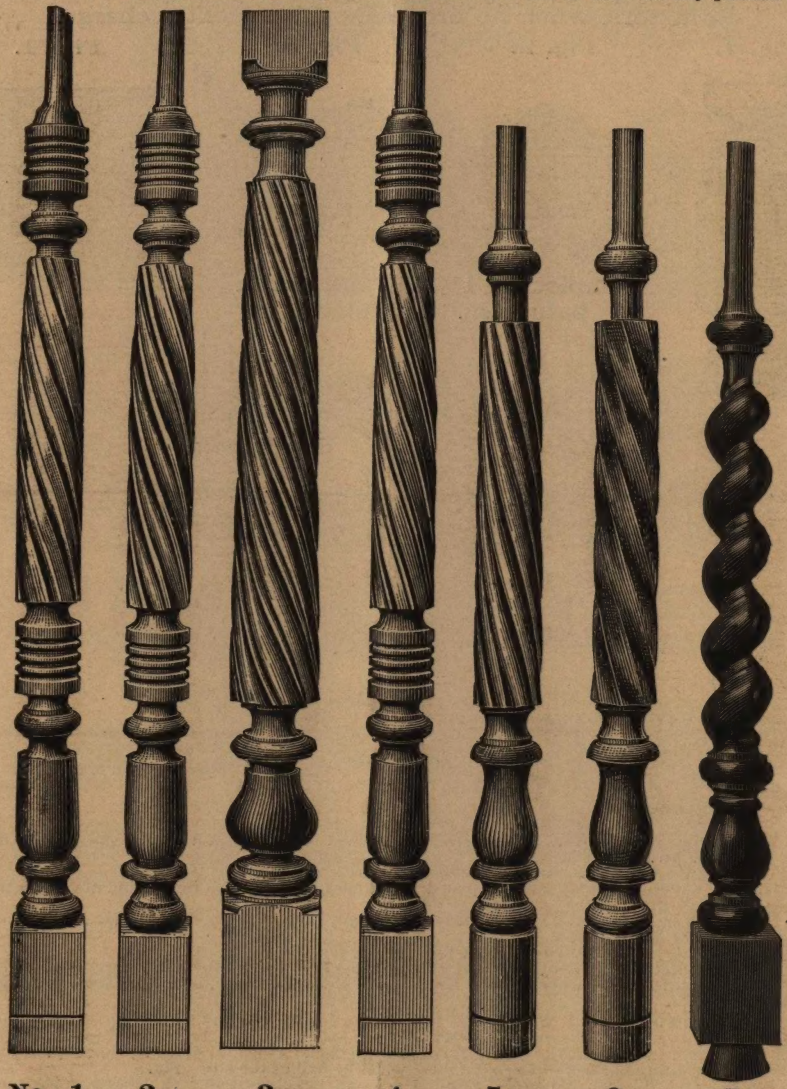
4th. No danger of splitting the step, **if the mortise is reasonably correct,** as the curved portion of the baluster, being the point of least resistance, is flattened when forced in the mortise.

DIRECTIONS.—Cut the mortises in the steps for 1½, 1¾, and 2 inch balusters, ⅞ inch **square** at the top and bevelled as shown in the accompanying templet; chip off a piece of the cone in order to make a flat bearing at the back; glue and drive in as in Fig. 3; cut off the projecting portion of the cone flush with the end of the step, Fig. 2.

For 2¼ and 2½ inch balusters, retain the same bevel, but cut the mortise 1⅜ inch **square** at the top, and proportionally large at the bottom.

For those possessing a Boring Machine or a Variety Moulder, Fig. 4 is the quickest mode, as the step can be bored from the under side with a bit ground to the proper angle, or a tapered cutter placed in the top of the spindle of a Variety Moulder, and the step run up to a stop on the table.

We have perfected a **Machine** by the aid of which we can readily and accurately **SPIRAL-FLUTE** Balusters (Machine or Hand Turned), Columns, etc., etc. Estimates for Spiral Work furnished on application. This work can be done on any pattern of



No. 1 2 3 4 5 6 7

The numbers refer to the patterns of SPIRALS ONLY.

turning desired. To lessen expense, the members should be so arranged that the Spiral shall terminate in a hollow as in these cuts; the machine can then run out and finish. If it abuts against a member, hand work would be necessary to complete, adding materially to the cost.

8 9 10 11 12 13 14

PEDESTAL NEWELS.

Observing the great reduction of late years in the price of **Ready Made Furniture,** owing to the division of labor and thorough system pursued, we have adopted the same plan in the manufacture of **Pedestal Newels; therefore variations, either over or under the sizes named, necessitating the manufacture of single Newels,** will add to the cost.

Having all the latest Improved Woodworking Machinery, we are enabled to produce our Regular Styles at much lower rates, and of superior finish to any made heretofore.

Our standard Newels are 3 ft. 7 in. from floor line to center of rail, but we add 2 in. extra to base, for adjustment.

Newels and Mantels

MADE FROM

ARCHITECTS' DESIGNS.

We use only thoroughly seasoned materials. The plain parts are filled with Wheeler's Patent Filler, and Oiled. Where panels are shown, they are Veneered with French Burl, and Polished.

Any of our Pedestal Newels may be used for gas jet, as in No. 12, by removing top ornament.

Turned Newels are also filled with Wheeler's Patent Filler, and Oiled.

Newels **Cabinet Finished** throughout at a slight additional cost.

DIRECTIONS

Necessary for Ordering

STAIR RAILS READY TO HANG.

For Stair Railing, Straight Flight.—We require the size of rise and tread, as **sawed out on string board,** the number of **risers,** the size of cylinder from face of string to fascia, which way it turns at head of stairs, and the number of feet of straight rail required at landing, measured from the spring line of cylinder. Unless we receive plan showing otherwise, we always suppose the top riser for a straight flight of stairs to be placed at the spring of cylinder.

For Circular or Winding Stairs.—We must have an exact plan of stairs as built, giving the size of rise and tread, the location of risers in cylinder; and when there are diminished steps above or below the spring line, or joint of cylinder, give the width of each step from face of riser to face of riser, as per plan No. 1, on following page.

Sawed Pieces for Twists.—Parties wishing to order sawed pieces for twists can enclose in a letter a paper pattern, cut the exact shape of face moulds, marking the number of each kind and the thickness required, and we will saw out and forward them charging only the measurement of lumber used, with time of marking out and sawing added.

TO GET OUT THE RAIL, WE NEED:

1. The number and height of risers as sawed out on string board.
2. The width of tread as sawed out on string board.
3. Diameter of cylinder from face of string board to fascia, and which way it turns on landing.
4. Length of level rail measured from spring line of cylinder to spring line of quarter turn.
5. Length of return measured from spring line of quarter turn to wall.
6. If turnout Easement, the amount of set off, measured from a continuation of the face of string to centre of newel.
7. On what tread, and the position on the tread the turnout commences.

ANGLE NEWELS.

See page 10.

When angle newels are required, a rough sketch showing length and positions of squares and turnings must be furnished, or **we will charge for time in laying out.**

If it is desired that we should lay them out, a plan and elevation of stairs, width of string, thickness of floor, and rise and tread of stairs must be furnished.
